

Kaspersky Endpoint Security: the 2012 VB100 Award Winner Goes from Strength to Strength.

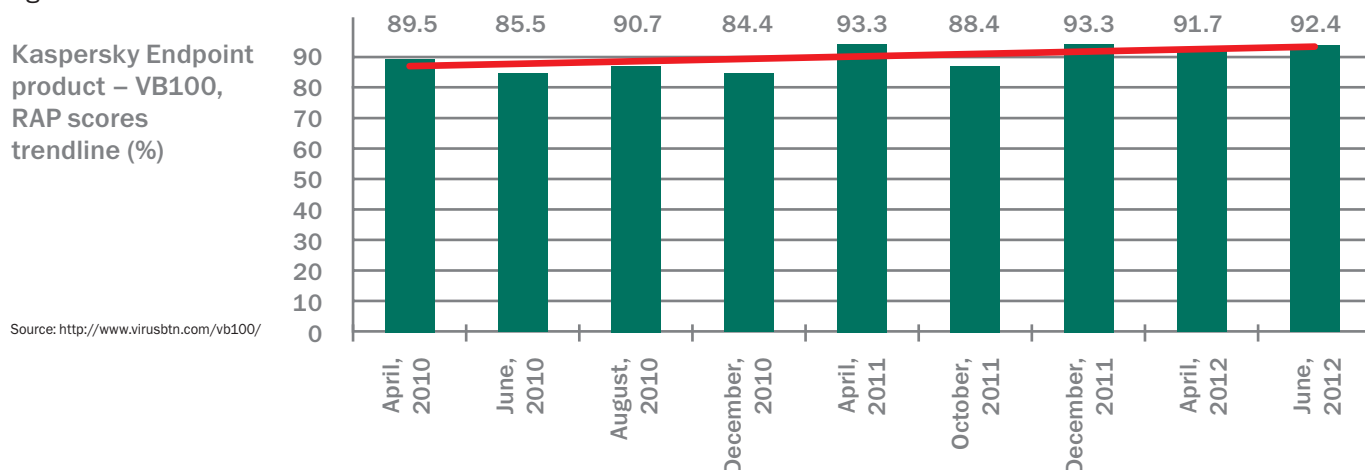

In April 2012, Kaspersky Lab once again won the coveted VB100 award from Virus Bulletin. Kaspersky Endpoint Security 8 for Windows® produced one of the best industry results in Reactive and Proactive (RAP) testing — 97.2% and 75.29% of malicious programs were neutralized respectively.

A total of 56 products were entered for comparative testing conducted on a Windows XP Professional SP3 platform. Kaspersky Endpoint Security 8 for Windows achieved the best scores among the corporate solutions – 91.7% – outperforming competitors including Sophos, McAfee, AVG and Eset.

In June 2012, Virus Bulletin conducted further tests on the Windows 2008 Server R2 platform. Again, Kaspersky has demonstrated one of the best detection rates at 92.4%, significantly higher than most leading competitors.

Over the last 2 years of rigorous independent testing by Virus Bulletin, Kaspersky's corporate endpoint product has consistently demonstrated the highest levels of overall protection. Its test results and a steadily climbing trendline prove beyond doubt that we at Kaspersky are able to provide our customers with the best outstanding protection against malware.
