

REMOTE KICKOFF: KASPERSKY ENDPOINT SECURITY FOR BUSINESS - ADVANCED

Antivirus, encryption, endpoint controls, mobile security and systems management

Kaspersky Lab's Advanced tier forms the protection and management platform your organization needs to enforce IT policy and keep users free from malware and accidental data loss through theft or misplaced devices.

Why use Kaspersky Lab's Remote Kickoff Services

Our experts will remotely access your environment, guiding you through the installation and configuration of your Kaspersky Lab applications. We'll show you the best practices and most efficient use of all the protection features. At the end of the engagement, you will have an optimized configuration of Kaspersky Lab applications that will minimize disruptions and enhance security for your environment.

Your Kaspersky Lab-Certified Professional will ...

- Provide an overview of the features and functions of your Kaspersky Lab software.
- Address the strategy for the complete removal of your current security software, including the creation and deployment of specific de-installation tasks.
- Show you best practices and guide you in the deployment to a representative subset of your environment.
- Backup and restore settings when performing an upgrade to a new version of your Kaspersky Lab software.

Included demonstrations and reviews:

- Kaspersky Security Center administrative console
- File Server Protection
- Anti-malware protection and firewall
- Encryption
- Cloud Protection via Kaspersky Security Network
- System Configuration and Deployment
- Application, Web and Device Control
- Vulnerability Scanning
- Application Whitelisting
- Patch Management
- Mobile Device Management
- Mobile Endpoint Security (Tablets/Smartphones)
- OS Imaging
