

Kaspersky Security for Virtualization

Kaspersky Lab's virtualization security solution offers two different solutions: Kaspersky Security for Virtualization - Agentless and Kaspersky Security for Virtualization - Light Agent

Why use Kaspersky Lab's Kickoff Remote Services?

Accessing your environment remotely, our experts will guide you through the installation and configuration of your Kaspersky Lab applications. We'll show you the best practices and most efficient use of all the protection features. At the end of the engagement you will have an optimized configuration of Kaspersky Lab applications that will minimize disruptions and enhance security for your virtual environment.

Your Kaspersky Lab-Certified Professional will ...

- Provide an overview of the features and functions of the Kaspersky software you have licensed.
- Ensure that all system requirements and environment pre-requisites for the selected virtualization solution are in place.
- Show you best practices and guide you in the deployment to a representative subset of your environment.
- Backup and restore of settings when performing an upgrade to a new version of your Kaspersky software*

Included demonstrations and reviews:

- Kaspersky Security Center administrative console*
- Virtual Environment readiness for KSV deployment
- File-level anti-malware protection
- Network-level protection
- Testing Real-Time Protection with Eicar test virus
- Cloud resources via Kaspersky Security Network
- Application, Web and Device Control
- Systems Configuration and Deployment
- Application Whitelisting

*Limited to Kaspersky Security for Virtualization.
