

Exceptional security across all endpoints

Since opening its first clinic in Madrid in 2000, Dentix has grown rapidly and now owns a network of over 260 clinics in Europe and Latin America.

Healthcare

- Madrid, Spain
- 270,000 patients
- 3,500 professionals
- Using Kaspersky Endpoint Security for Business Select

“Kaspersky Lab provided us with a flexible and effective tool that boosts our productivity. The solution makes viewing, controlling and protecting our network straightforward, giving our systems department a lot of time for other projects and more complex tasks.”

Juan Carlos Calvo,
Systems Director, Dentix

Dentix Clinics

Since opening its first clinic in Madrid in 2000, Dentix has grown rapidly and now owns a network of over 260 clinics in Europe and Latin America. The company’s rapid growth has been supported by major efforts in technology and communications, resulting in a state-of-the-art, scalable, robust, flexible, reliable and, most importantly, secure infrastructure that supports its clinics and central operations. Having accumulated medical records and private data of its 450,000 patients, Dentix wanted to ensure this information was protected against potential risk and cybersecurity threats, which led them to employ optimal protective measures for over 4,500 workstations and 100 servers.

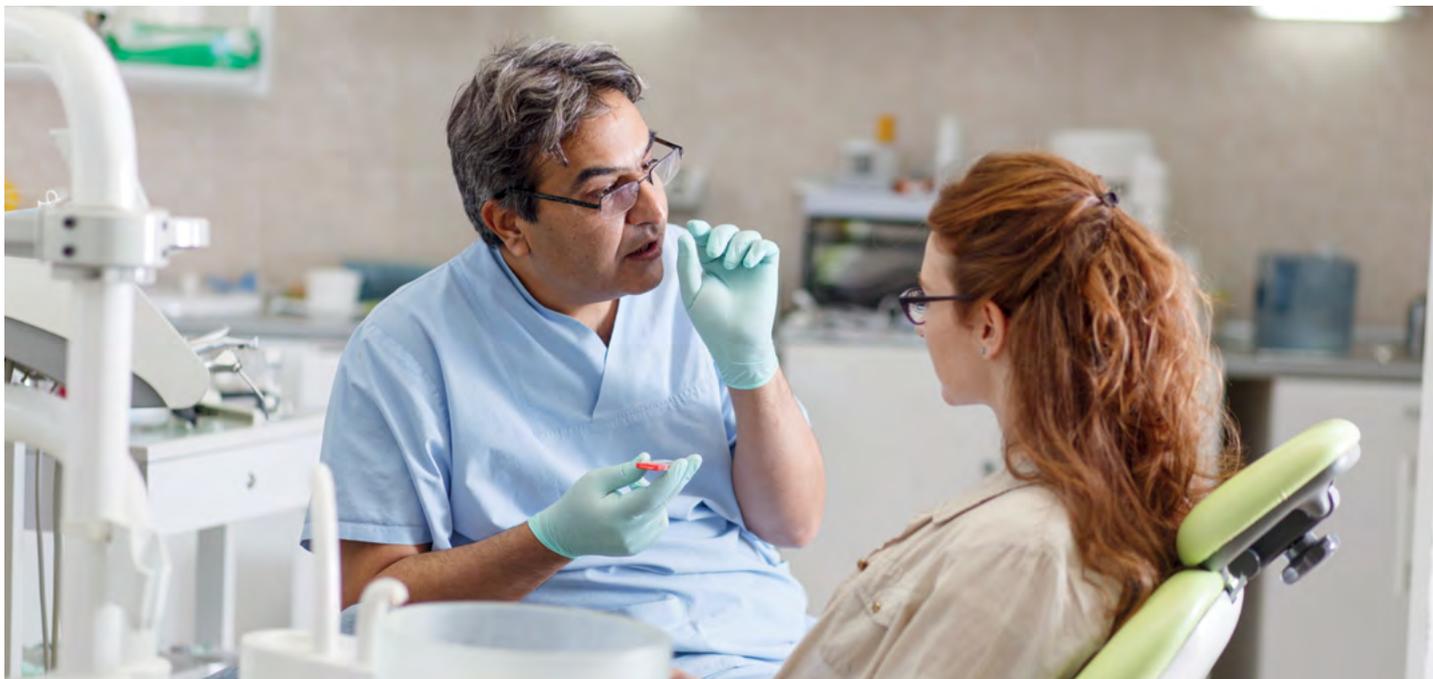

Challenge

“One of the biggest issues we faced was the lack of a simple, centralized management structure to guarantee the security of our devices. Individual clinics had to make sure their devices had suitable protection software, as well as keep it activated and updated,” explains Juan Carlos Calvo, Systems Director at Dentix.

“It was hard to keep everything up-to-date, leaving the door open to all sorts of vulnerabilities. We needed a solution to help us manage our devices, something that guaranteed security but did not require significant time and servicing on our part.”

Dentix also had a project to provide its clinics and staff with tablets and other mobile devices to facilitate their work. The security of these devices also presented the systems team with a challenge to provide a secure solution that could ensure peace of mind.

“Dentix is also a pioneer in the use of state-of-the-art technology to improve effectiveness, visual appearance and patient satisfaction. Devices like tablets, which are easy to use, comfortable and manageable, allow patients to benefit from better service and care,” explains Calvo.

Security

Dynamic application whitelists, protection of personal data and confidential information of the public and users

Control

Easy to configure and deploy
Centralised web control tools for applications, devices and internet

Mobile

Management of mobile devices, remote anti-theft tools

The Kaspersky Lab solution

Endpoints are known to be the sources of the majority of cybersecurity problems encountered by organizations. 39% of attacks aimed at endpoints succeed in breaching companies' firewalls. Moreover, in 75% of cybercrimes, email is used as a means to achieve the desired effect. It is also important to consider that 85% of threats only get discovered after the perimeter defence has been breached.

"Protecting these endpoints was a priority for Dentix because they contain significant volumes of confidential information and clinical patient data," says Calvo.

Working with Keytron – a Kaspersky Lab partner – Dentix chose Kaspersky Endpoint Security Business Select to guarantee compliance with the company's security policies and block malware on its devices. Trials carried out in a test environment showed the solution to be fully effective and it was quickly rolled out throughout the organization.

260

Clinics

3,000

Licenses

"We were aware of Kaspersky Lab's reputation and the quality of its products. We did not hesitate, it was an easy decision to make," explains Calvo. "What is more, the price offered by Kaspersky Lab and the service provided by Keytron were clearly a winning combination."

The Mobile Device Management (MDM) feature of Kaspersky Endpoint Security for Business Select includes deployment and protection for mobile devices, which allows both remote and local deployment as well as providing workstations with a powerful anti-malware solution. It also has flexible control tools for applications and devices, dynamic whitelist management, vulnerability analyzer, web control, remote anti-theft tools, data encryption, proactive management and regular updates, alongside a range of other functions. Kaspersky Security Center also provides a single console for managing all these features.

"Kaspersky Endpoint Security for Business Select provides increased protection and transparent management," remarks Calvo. "Kaspersky Lab provided us with a flexible and effective tool that boosts our productivity. The solution makes viewing, controlling and protecting our network straightforward, giving our systems department a lot of time for other projects and more complex tasks."
