IT security budgets don’t always reflect growing business demands and escalating threat levels. Resources must be optimized to meet the challenges of today – and tomorrow. But how do you identify the right security solution – one that will protect every element of your IT infrastructure against the most advanced cyberthreats, and ensure business continuity in a changing world, without blowing your budget?

Try asking our customers. Kaspersky Endpoint Security for Business delivers adaptive, comprehensive security that scales with your business, safeguarding its continuity and assets with a full stack of the most advanced technologies. And the results speak for themselves.

World-leading threat intelligence is built into our DNA and influences everything we do. As an independent company we are more agile, think differently and act faster to confront and neutralize cyberthreats, regardless of their origin or purpose. That’s how our products and solutions are able to deliver levels of True Cybersecurity that no other vendor can offer.

Protect what your business values most

Try asking our customers. Kaspersky Endpoint Security for Business delivers adaptive, comprehensive security that scales with your business, safeguarding its continuity and assets with a full stack of the most advanced technologies. And the results speak for themselves.

World-leading threat intelligence is built into our DNA and influences everything we do. As an independent company we are more agile, think differently and act faster to confront and neutralize cyberthreats, regardless of their origin or purpose. That’s how our products and solutions are able to deliver levels of True Cybersecurity that no other vendor can offer.

True Cybersecurity that leaves the rest behind

Advanced technologies combined with our multi-layered approach achieve the perfect balance between performance and efficient protection. Kaspersky Lab is ranked among the 3 highest vendors in each Use Case in Gartner’s 2018 Critical Capabilities for Endpoint Protection Platforms.

- Protects endpoints, servers and gateways: The world’s most tested & awarded security technologies help boost detection with minimal false positives – protecting file, mail and web servers and gateways as well every endpoint.
- Streamlines security management and delegation: The unified web console features Active Directory integration, as well as Role-Based Access Control (RBAC) and customizable dashboards, so access can be streamlined in line with team member responsibilities.
- Cuts complexity and total cost of ownership: Less effort needed to stay current, even during migration between versions of Windows or upgrade to future versions of our endpoint protection product.
- Hardens systems and boosts productivity: Host Intrusion Prevention, cloud-enabled anomaly, web, device and application controls reduce your attack surface and help keep corporate resources under control, even outside your IT perimeter.
- Secures vulnerabilities 24x7 to reduce attack entry-points: With support for 150+ software applications, our vulnerability monitoring and patch management provides comprehensive cover for all the most widely-used business applications.
- Saves time by automating OS and software deployment tasks: Setting up new workstations in branch or home offices can be done remotely and automatically. You can also roll out and schedule new applications for automatic installation after-hours.
- Spots more attacks and intrusions – even without regular updates: Our lightweight, cloud mode delivers optimum protection with minimal impact on PC resources and internet bandwidth usage.

Best-in-industry efficiency

Adaptive protection built by world-leading experts, with minimal impact on resources and management overheads. Protection and ML-based technologies identify and block endpoint threats, regardless of origin or target. And, if you’re attacked, malicious actions are rolled back so your users can keep on working.

Custom-tailored for your environment

Secures diverse environments and scales easily, without extensive planning required, even in heterogeneous IT infrastructures, providing the freedom to change any pre-defined settings and to choose when to adopt new capabilities.

Customer satisfaction assured

A single product countering threats to your data wherever it sits – with transparent costs and licensing. Our customers consistently express outstanding levels of satisfaction with the results, as is regularly confirmed in independent reviews, complementing our leadership position in independent tests for the last 6 years (Top 3).
Beyond endpoint protection – now and in future

Based on unparalleled sources of real-time threat intelligence and machine learning, our technologies continually evolve, enabling you to secure what your business values most against cryptominers and the latest, most complex cyberthreats.

Endorsed by decision-makers like you

Forget the marketing hype - listen to the recommendations of those who have already upgraded to Kaspersky Endpoint Security for Business, and are enjoying the benefits:

- Consistently outstanding protection – easy one-step upgrades ensure you’re always up-to-date and ready to counter the latest cyberthreats
- User-friendly and centralized management - one server, one web console, one single agent
- Deeper integration of components - built in-house with decades of top ratings and independent verification
- Everything you need in a single purchase – transparent cost and licensing.

“Complete Security Protection With Fast Implementation.”

See for yourself

Our strong focus on R&D allows us to deploy resources to what matters most, to deliver cost-effective protection technologies and incorporate many technological innovations into our products.
