True Cybersecurity that leaves the rest behind

The technologies layered into Kaspersky Endpoint Security for Business provide a perfect balance between performance and efficient protection. This balance may explain why our products deliver one of the highest detection rates in the industry, as continuously demonstrated through independent tests. Kaspersky is ranked among the 3 highest vendors in each Use Case in Gartner’s 2018 Critical Capabilities for Endpoint Protection Platforms.

Protects endpoints, servers and gateways
The world’s most tested and most awarded security technologies help boost detection with minimal false positives – protecting containers, servers and gateways as well every endpoint.

Streamlines security management and delegation
The unified web console features Active Directory integration, as well as Role-Based Access Control (RBAC) and customizable dashboards, so access can be streamlined in line with team member responsibilities.

Cuts complexity and total cost of ownership
Less effort needed to stay current, even during migration between versions of Windows or upgrade to future versions of our endpoint protection product.

Hardens systems and boosts productivity
Host Intrusion Prevention and cloud-enabled anomaly, web, device and application controls all reduce your attack surface and help keep corporate resources under control, even outside your IT perimeter.

Secures vulnerabilities 24x7 to reduce attack entry-points
With support for 150+ software applications, our vulnerability monitoring and patch management provides comprehensive cover for all the most widely-used business applications.

Saves time by automating OS and software deployment tasks
Setting up new workstations in branch or home offices can be done remotely and automatically. You can also roll out and schedule new applications for automatic installation after-hours.

Spots more attacks and intrusions – even without regular updates
Our lightweight cloud mode delivers optimum protection with minimal impact on PC resources and internet bandwidth usage. Signature-less components enable the detection of threats even without frequent updates and are enhanced by Next Gen static (pre-execution) and dynamic(post-execution) Machine Learning (ML).

Our knowledge is your power
Adaptive protection built by world-leading experts, with minimal impact on resources and management overheads. Protection and machine learning-based technologies identify and block endpoint threats, regardless of origin or target. And, if you’re attacked, malicious actions are rolled back so your users can keep on working.

A little mistake shouldn’t become a big deal
Secures diverse environments and scales easily, without extensive planning required, even in heterogeneous IT infrastructures, providing the freedom to change any pre-defined settings and to choose when to adopt new capabilities.

The calm at the center of digital transformation
We’ve automated processes you shouldn’t have to think about, like EDR agent deployment, patch management, post-attack rollback and software distribution. Our consistently high performance in independent tests and analyst reviews means you don’t just have to take our word for it - this really is cybersecurity you can trust.
Beyond endpoint protection – now and in future

Based on unparalleled sources of real-time threat intelligence and machine learning, our technologies continually evolve, enabling you to secure what your business values most against the latest, most complex cyberthreats.

Three progressive feature packs

Kaspersky Endpoint Security for Business tools and technologies are intelligently balanced across progressive tiers to meet your evolving security and IT needs at every point in your business journey.

See our separate data sheets covering each tier – Select, Advanced and Total – for more details.

Supported and Services

Operating in more than 200 countries from 35 offices worldwide, our 24/7 commitment to global support is reflected in our Maintenance Service Agreement (MSA) support packages. Our Professional Services teams are on standby to ensure that you extract the maximum benefit from your solution, providing assistance with deployment as well as support during critical incidents.

Recognized by decision-makers like you

Forget the marketing hype – listen to the recommendations of those who have already upgraded to Kaspersky Endpoint Security for Business, and are enjoying the benefits:

- Consistently outstanding protection – easy one-step upgrades ensure you’re always up-to-date and ready to counter the latest cyber threats
- User-friendly and centralized management – one server, one web console, one single agent
- Deeper integration of components – built in-house with decades of top ratings and independent verification
- Everything you need in a single purchase – transparent cost and licensing.

See for yourself

Our strong focus on R&D allows us to deploy resources to what matters most, to deliver cost-effective protection technologies and incorporate so many technological innovations into our products. The bigger picture – Kaspersky IT Security Solutions for Business

Endpoint protection, though critical, is just the beginning. Whether you operate a best-of-breed or a single-source security strategy, Kaspersky offers products for hybrid cloud infrastructures and for legacy Windows XP systems that interlock or work independently, so you can pick and choose without sacrificing performance efficiency or freedom of choice.
