

Kaspersky Security for Mobile

Multilayered security, management and control for all mobile endpoints

Features

- Powerful anti-malware
- Anti-phishing and Anti-Spam
- Web protection
- Application control
- Rooting/jailbreak detection
- Application containerization
- Anti-theft
- Mobile Device Management
- Self-service portal
- Centralized solution management
- Web console

Supported platforms:

- Android™
- iOS
- Windows 10 Mobile

Reap the business benefits of mobile devices without compromising on security.

Kaspersky Security for Mobile is a Mobile Threat Defense (MTD) and Mobile Threat Management (MTM) solution that helps businesses increase productivity and efficiency by ensuring staff can perform mobile tasks safely and securely.

In 2016, Kaspersky Lab detected over 8.5-million mobile malware attacks. With the average employee using three or more mobile devices, ensuring these devices are secured, no matter where they are, is a business imperative. Kaspersky Security for Mobile delivers maximum mobile security with minimum fuss.

Highlights

ADVANCED ANTI-MALWARE

Mobile malware continues to surge. In the first half of 2017 alone, the number of mobile ransomware threats exceeded the total number of threats detected in 2016. Ransomware targeting Android-based devices increased four-fold in 2016.

Kaspersky Security for Mobile combines anti-malware with cloud-assisted threat intelligence and machine learning to guard against known, unknown and advanced threats to data stored on mobile devices.

MOBILE DEVICE MANAGEMENT (MDM)

Group policies for Android, iOS and Windows 10 Mobile – set up/enable rules for passwords, encryption, Bluetooth and camera. Run reports on the device and applications installed. Integration with all leading mobile device management platforms enables remote 'Over the Air' (OTA) deployment and control for easier usability and management of supported devices.

MOBILE APPLICATION MANAGEMENT (MAM)

Application control for Android and iOS allows users to define which apps may be installed, and to create blacklists and whitelists for these apps.

FLEXIBLE DEPLOYMENT OPTIONS

Flexible enrollment options support both BYOD and COPE (company owned, personally enabled) scenarios – those in a BYOD environment can install from Google Play or the AppStore, while those with a COPE strategy can do so via the self-service portal or custom installation. This flexibility ensures that companies don't have to change their current mobile strategy to receive protection.

CENTRALIZED SOLUTION MANAGEMENT

Kaspersky Security for Mobile allows you to manage mobile devices from the same console as other endpoint platforms: Kaspersky Security Center or Kaspersky Endpoint Security Cloud. View data on devices, create and manage policies, send commands to devices and run reports – all from one easy-to-manage, central console.

Mobile Security and Management Features

POWERFUL ANTI-MALWARE

Proactive, cloud-assisted threat detection and analysis combined with traditional technologies to provide protection from known, unknown and advanced threats. On-demand and scheduled scans combine with automatic updates for enhanced protection.

ANTI-PHISHING AND ANTI-SPAM

Powerful anti-phishing and anti-spam technologies protect the device and its data from phishing attacks and help filter out unwanted calls and texts.

WEB CONTROL/SAFE BROWSER

Reliable, safe web filtering is supported in real-time by the constantly updated Kaspersky Security Network (KSN) to block access to malicious and other unwanted web sites. Android devices are supported via Chrome-based browsers; for iOS and Windows 10 Mobile, Kaspersky Safe Browser is available.

APPLICATION CONTROL

Restrict application use to administrator-approved software only. Application control provides data on installed software and enables administrators to enforce installation of specific applications. KSN-integration enables easy creation and management of black and white-lists.

ROOTING/JAILBREAK DETECTION

On approximately 5% of mobile devices administrative tasks can be performed on them without user consent or action. Kaspersky Security for Mobile eliminates this risk by detecting rooted or jailbroken devices and alerting administrators, who can block or selectively wipe them.

APPLICATION CONTAINERIZATION

Separate business and personal data by 'wrapping' applications into containers, apply additional policies, such as encryption, to protect sensitive data. Selectively wipe containerized data when an employee leaves, without impacting personal data. Enforce authorization for container access.

ANTI-THEFT

Protect business data, even when devices are stolen, using remote anti-theft features such as device locate-and-lock, selective or full wipe, SIM watch, 'mugshot' and alarm activation. Integration with Google Firebase Cloud Messaging (FCM) and Apple Push Notification Services (APNs) enables near-immediate command delivery. With user self-service portal there is no need to lose time waiting for administrator to activate anti-theft measures.

MOBILE DEVICE MANAGEMENT (MDM)

Support for Microsoft® Exchange ActiveSync®, Samsung KNOX™ and iOS MDM enables the creation of unified or separate policies for each platform, e.g. mandatory encryption, password enforcement, camera usage, APN/VPN settings. Kaspersky Security for Mobile not only supports iOS MM – it also includes management of iOS-supervised devices, giving system administrators comprehensive management rights, further enhancing user security. Android for Work enables business profile creation, business application and device management and enables the separation of business and personal data on the same device.

SELF-SERVICE PORTAL

Delegate routine security management to employees, enable self-registration of approved devices. During the new device enablement process, all required VPN and mail certificates can be delivered automatically through the portal. In case of device loss, employees can perform all available anti-theft actions.

CENTRALIZED SOLUTION MANAGEMENT

Manage all functionality within Kaspersky Security Center or Kaspersky Endpoint Security Cloud – no need for a separate management tool for mobile devices, simply take care of endpoint and mobile from the same console.

How to buy

- Kaspersky Security for Mobile is included in:
- Kaspersky Endpoint Security Cloud
- Kaspersky Endpoint Security for Business Select
- Kaspersky Endpoint Security for Business Advanced
- Kaspersky Total Security for Business

Kaspersky Security for Mobile can also be purchased separately as a Targeted Solution. Contact your reseller for details and pricing.
