

## KL 046.12.7:

# Kaspersky Next EDR Foundations

## Featured products

- Kaspersky Security Center Linux 12.2
- Kaspersky Endpoint Security for Windows 12.7
- Kaspersky Endpoint Security for Linux 15.2

## Course objective

The main objective of the course is to provide participants with all the knowledge required to deploy, configure, and manage the solution.

The course teaches how to design, deploy, and maintain protection systems based on Kaspersky Endpoint Security and centrally manage them via Kaspersky Security Center. It describes products designed to protect a network of up to 1000 endpoints in a single location. In this course, endpoints are Windows and Linux servers and workstations.

The theoretical part of the course and hands-on labs provide participants with the knowledge and skills necessary to:

- Describe the capabilities of Kaspersky Endpoint Security and Kaspersky Security Center.
- Design and deploy an optimal protection solution based on Kaspersky Endpoint Security in a not-too-large network and manage it via Kaspersky Security Center.
- Maintain the deployed system.

## Duration

4 days

## Requirements for participants

The course is aimed at technical support and presale engineers. Attendees must possess:

- Basic understanding of networking technologies, such as TCP/IP, DNS, email, web
- Basic Windows and Linux administering skills
- Basic knowledge of information security principles

# Contents

1. Deployment
2. Management of Windows protection
3. Windows security controls
4. EDR Optimum (Windows)
5. Protection for Linux
6. Administration

## Labs

- Lab 1. Install Kaspersky Security Center Linux
- Lab 2. Configure Kaspersky Security Center Linux
- Lab 3. Deploy Kaspersky Endpoint Security for Windows
- Lab 4. Create a structure of managed computers
- Lab 5. Configure file protection
- Lab 6. Configure Mail Threat Protection
- Lab 7. Test Web Threat Protection
- Lab 8. Protect shared folders against ransomware
- Lab 9. Test protection against fileless threats
- Lab 10. Test protection against exploits
- Lab 11. Configure Host Intrusion Prevention to protect against ransomware
- Lab 12. Test Network Threat Protection
- Lab 13. Configure Application Control
- Lab 14. Block launch of unknown applications in the network
- Lab 15. Configure web access control
- Lab 16. Simulate an attack on the enterprise network
- Lab 17. Deploy Kaspersky Endpoint Detection and Response
- Lab 18. Prepare Kaspersky EDR for use
- Lab 19. Investigate an incident
- Lab 20. Install Kaspersky Endpoint Security for Linux on managed devices
- Lab 21. Add Linux computers to the Managed Devices structure

- Lab 22. Set up essential protection for a Linux server
- Lab 23. Set up advanced protection for a Linux server
- Lab 24. Configure security controls on a Linux computer
- Lab 25. Manage protection using kesi-control
- Lab 26. Manage Linux accounts and devices
- Lab 27. Configure password protection
- Lab 28. Customize the dashboard
- Lab 29. Configure reports
- Lab 30. Collect diagnostic information
